Gnani AI Multilingual Student Assistant

Solution Pitch – Great Indian AI Internship Challenge

Problem Statement

Students often face difficulties accessing academic assistance, understanding study materials and getting support in a language or communication format they are comfortable with. Traditional learning resources may not provide interactive, voice-based assistance.

Proposed Solution

The Gnani AI Multilingual Student Assistant is an AI-powered educational web application that helps students interact with an AI assistant through text and voice. It aims to make academic support more accessible and convenient.

Key Features

- **AI Study Chat:** Provides interactive responses to students' academic questions.
- **Multilingual Voice Assistant:** Supports voice-based interaction.
- **Speech-to-Text:** Uses Gnani AI Prisma to convert spoken questions into text.
- **Text-to-Speech:** Uses Gnani AI Timbre to generate spoken responses.
- **Photo Question Solver:** Allows students to submit questions through images.
- **PDF Tutor:** Provides a document-based learning interface.
- **Study Materials:** Offers a dedicated space for learning resources.

Technology Stack

Python, Streamlit, Gnani AI Prisma API and Gnani AI Timbre API.

How It Works

Students enter a question through text, voice or an uploaded file. The application processes the input, obtains an AI-generated response and presents the answer through text and, where enabled, speech.

Expected Impact

The application aims to improve accessibility to educational assistance, encourage interactive learning and reduce communication barriers for students.
